Table of Contents

1.0 INTRODUCTION

In accordance with Schedule 5, Condition 9 of Project Approval 09_0178 this report provides a summary of environmental monitoring results for Baal Bone Colliery, for the period **1 April 2013 to 30 June 2013**. Baal Bone's licensed discharge and monitoring locations are identified in **Drawing 1** and **Drawing 2**. Noise monitoring locations are identified in **Drawing 3**. Results included in this summary include – air quality, surface water quality and dewatering bore flow rates.

2.0 AIR QUALITY

In accordance with Schedule 3, Condition 12 of Project Approval 09_0178 Baal Bone Colliery has developed an Air Quality Monitoring Program (AQMP). The Department of Planning approved the AQMP in correspondence dated 6 July 2011.

Monthly dust fall-out monitoring is carried out in accordance with Australian Standard AS3580.10.1, EPL requirements and Baal Bone's AQMP. Baal Bone has engaged ALS Group Environmental Division Mudgee, a NATA Accredited laboratory, to undertake monthly sampling, monitoring and analysis.

Baal Bone maintains a network of five dust deposition gauges to monitor dust levels around site and in the vicinity of the nearest neighbour, these are:

- Sample location DM1 (EPL monitoring point No. 7);
- Sample location DM2 (EPL monitoring point No. 13);
- Sample location DM3 (EPL monitoring point No. 14); and
- Sample location DM4 (EPL monitoring point No. 15).
- Sample location DM5 – installed 8 September 2011 (EPL monitoring point No. 16).

Particulate matter less than 10 µm in size (PM10) and high volume air sampler total suspended particulate (TSP) monitors were installed 23 October 2011 and 29 October 2011 respectively in accordance with a revised AQMP which was approved by the Department of Planning and Infrastructure in accordance with Project Approval 09_0178. The location of the TSP and PM10 monitors are situated at the same location as DM2.

In accordance with the AQMP, monitoring for PM10 and TSP was discontinued in June 2012. The monitoring was discontinued following Baal Bone mining operations entering care and maintenance in September 2011, and the completion of washing and transporting of coal off-site in December 2011 and April 2012 respectively.

Locations of all air quality monitoring gauges are shown in **Drawing 1**.

2.1 Air Quality Impact Assessment Criteria

Schedule 3, Condition 10 of Project Approval 09_0178 includes air quality impact assessment criteria for the project which are summarised in **Table 2.1** below. The pollutants to be monitored include deposited dust, TSP and PM10.

Table 2.1: Baal Bone Air Quality Impact Assessment Criteria

Pollutant	Averaging period	Criterion	
Deposited dust	Annual	Maximum increase	Maximum total
		2 g/m^2/month	4 g/m^2/month
TSP	Annual	90 $\mu g/m^3$	
PM^{10}	24 hour	50 $\mu g/m^3$	
	Annual	30 $\mu g/m^3$	

2.2 Depositional Dust Monitoring Results

Levels of deposited dust at Baal Bone's five gauges were below 4g/m^2/month during the reporting period (refer to **Table 2.2**). Dust levels at all five gauges satisfied the criterion outlined in Project Approval 09_0178.

Figures 2.1 to 2.5 provide monthly results for each depositional dust gauge for 2013.

2.3 Total Suspended Particulate Results

A high volume air sampler (HVAS) was installed in October 2011 to monitor total suspended particulates (TSP) at one location: DM2. The HVAS ran on a six-day cycle in accordance with EPA/OEH requirements.

In accordance with the DoPI approved Air Quality Monitoring Program, monitoring for TSP was discontinued in June 2012. The monitoring was discontinued following Baal Bone mining operations entering care and maintenance in September 2011, and the completion of coal washing and transporting of coal off-site in December 2011 and April 2012 respectively.

2.4 PM_{10} Results

A Tapered Element Oscillating Microbalance Analyser (TEOM) was installed in October 2011 to measure particulate matter up to 10 microns in diameter (PM_{10}) at one location: DM2.

In accordance with the DoPI approved Air Quality Monitoring Program, monitoring for PM_{10} was discontinued in June 2012. The monitoring was discontinued following Baal Bone mining operations entering care and maintenance in September 2011, and the completion of washing and transporting of coal off-site in December 2011 and April 2012 respectively.

3.0 SURFACE WATER

Baal Bone has engaged ALS Group Environmental Division Mudgee, a NATA Accredited laboratory, to undertake monthly sampling, monitoring and analysis of a range of surface and subsurface waters.

Baal Bone maintains a network of five licensed discharge and monitoring points in accordance with EPL 765 (viz. LD2, LD3, LD6, LDP1 and WMP1)(**Drawing 1 and Drawing 2**).

Baal Bone Colliery has developed a Noise Management Plan (NMP) in accordance with Schedule 3, Condition 6 of Project Approval 09_0178. The NMP was approved by the Department of Planning in correspondence dated 11 November 2011.

As per the NMP Baal Bone Colliery operates a real time noise monitor at location R2. In addition to real time noise monitoring (which is supplementary to regulatory measurements), from 2013 onwards attended monitoring is undertaken on an annual basis at receptors R1 and R2/R3 (refer to Drawing 3).

5.1 Noise Impact Assessment Criteria

Schedule 3, Condition 4 of Project Approval 09_0178 includes long term noise impact assessment criteria. Table 5.1 outlines the assessment criteria.
